Engineering Data Book - 13th EDITION

HALF-PRICE SALE!

The 13th Edition of the GPAC Engineering Data Book/CD Set is available in two versions: FPS (English Units) and SI (Metric Units). Both versions consist of a compilation of basic design information, together with the latest technical data and approved procedures for use by gas processing personnel to determine operating and design parameters for hydrocarbon processing and related facilities. This information is intended to aid design engineers, who, despite increasing availability of computer programs and other sophisticated design methods, require a general reference book as a guide to accepted engineering practices for estimating, feasibility studies, preliminary design and for making on-site operating decisions.

All twenty-six sections of both versions were updated. Both versions of the 13th Edition are published in an 850-page, two volume loose leaf format along with a CD or USB loaded with the electronic version of the manual. The FPS Version uses the traditional units used in the USA – foot, pound, second; while the SI Version uses the recognized International System of Units as set forth in ASTM E-380 “Standard Metric Practices”.
